Job description / Tasks to be developed:

The *Liver cell plasticity and Tissue repair Group* at IDIBAPS, Barcelona, Spain, wishes to fill a postdoctoral position to lead the project "*Understanding hepatoblastoma to design new personalized treatments (HB-Project)*". The project will use organoid and gene editing technologies to evaluate the tumorigenicity of epigenetic alterations identified in hepatoblastoma. The final aim of the project is developing clinically relevant strategies to target hepatoblastoma.

The post holder will be part of a team working on liver cell plasticity and stem cell research. By using human samples, experimental models of liver disease and in vitro systems with primary and stem cells, the group seeks to identify the factors responsible for the poor regeneration of the liver and the mechanisms that alter tissue repair. In this context, the group is particularly interested in understanding cell plasticity and how the cells maintain the identity in response to damage and disease.
